## Basic Excel Functions

Excel functions (can be found under the "Formulas" ribbon) are classified based on the type of the formula.

The following are the most commonly used types of Excel functions:

- Statistical - perform calculations on a group of cells in a worksheet related to statistics and probability
- Math - apply mathematical formulas to allow basic calculation features. For example, summing up several numbers together
- Logical - test a cell to determine TRUE or FALSE condition
- Lookup \& Reference - find the information for a certain cell using cross reference between different data sets (arrays/range of data)
- Financial - provide the calculations related to financial and accounting terms

This example spreadsheet will be used to explain the functions used:

| Gradebook |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Student | Quiz 1 | Quiz 2 | Quiz 3 | Total | AVG | Average after a 3 mark bonus when student's Quiz 1 mark is greater than 85 | Grade | Rank |
| Alex | 85 | 75 | 64 | 224 | 74.67 | 74.67 | C | 4 |
| Kate | 33 | 98 | 88 | 219 | 73 | 73.00 | C | 5 |
| Anjali | 94 | 45 | 54 | 193 | 64.33 | 67.33 | D | 6 |
| Arnav | 87 | 65 | 65 | 217 | 72.33 | 75.33 | C | 3 |
| Chang | 53 | 35 | 87 | 175 | 58.33 | 58.33 | F | 7 |
| Francisco | 76 | 85 | 77 | 238 | 79.33 | 79.33 | C | 2 |
| Eun Jung | 79 | 76 | 92 | 247 | 82.33 | 82.33 | B | 1 |
| Min | 33 | 35 | 54 | 175 | 58.33 | 58.33 |  |  |
| Max | 94 | 98 | 92 | 247 | 82.33 | 82.33 |  |  |
| AVG per quiz | 72.43 | 68.43 | 75.29 | 216.14 | 72.05 | 72.90 |  |  |

## Statistical

The most commonly used statistical functions include MIN(), MAX(), AVERAGE() and COUNT().
MIN(number1, [number2, ... number n]) OR MIN(range of cells)
The general formula is the same for all statistical functions.
EXAMPLE: =COUNT(B3, C4, D3, E3); =MAX(B3:B9)
=AVERAGE(B3:B11)

## Math

Math functions include functions such as sum(), sumif()
SUM(number1, [number2, ... number n]) OR SUM(cell1:cell2)
number1, number2 - list of numbers or cels cell1:cell2 - a range of cells
EXAMPLE: =SUM(12,43,56,44,32)
=SUM(B3:D3)
SUMIF(range, criteria, [sum range])
range - range of cells to which apply the criteria against criteria - the criteria to determine which cells to add
sum_range - optional, the range of cells to sum together

|  | 4 | A | B | c | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | Student | Quiz 1 | Quiz 2 | Quiz 3 | Total | Average per student |
|  | 2 | Alex | 85 | 75 | 64 | 224 | 74.67 |
|  | 3 | Kate | 33 | 98 | 88 | 219 | 73 |
|  | 4 | Anjali | 94 | 45 | 54 | 193 | 64.33 |
|  | 5 | Arnav | 87 | 65 | 65 | 217 | 72.33 |
|  | 6 | Chang | 53 | 35 | 87 | 175 | 58.33 |
|  | 7 | Francisco | 76 | 85 | 77 | 238 | 79.33 |
|  | 8 | Eun Jung | 79 | 76 | 92 | 247 | 82.33 |
|  | 9 |  |  |  |  |  |  |
| EXAMPLE: |  | find the total mark of a student who has the max average | =SUMIF (F2 | F8,F10,E2 |  | MAX Average | 82.33 |
| Result:___ (fill in you answer) |  |  |  |  |  |  |  |

## Logical

The most common example of logical functions is if()
IF(condition, value if true, [value if false])
Condition - the value to test
value_if_true - the value to return if the condition is TRUE value_if_false - optional, the value to return if the condition is FALSE

Example: $=\mathrm{IF}(\mathrm{B} 3>85, \mathrm{~F} 3+3, \mathrm{~F} 3)$ - give 3 bonus marks if Quiz1 mark was greater than 85

## Lookup \& Reference

VLOOKUP is used for vertical lookup of a certain value
VLOOKUP( value, table, index_number, [approximate_match] )
value - the value to search for
table - two or more columns of data
index_number - the column number in table from which the matching value must be returned
approximate_match - optional. Enter FALSE to find an exact match. Enter TRUE to find an approximate match. If this parameter is omitted, TRUE is the default

EXAMPLE: =VLOOKUP(F3,\$D\$15:\$E\$19,2)

## Compatibility

RANK is used to determine the rank of a number in a range of data.
RANK(number, ref, [order])
number - the value for which you want to determine the rank
ref - an array of range of numbers
order - optional. Specifies how to rank numbers

EXAMPLE: =RANK(G3,\$G\$3:\$G\$9)
The complete spreadsheet worksheet with formulas:

| 4 | A | B | c | D | E | F | G | H | I |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Gradebook |  |  |  |  |  |  |  |  |
| 2 | Student | Quiz 1 | Quiz 2 | Quiz 3 | Total | Average per student | Average after a 3 mark bonus when student's Quiz 1 mark is greater than 85 | Grade | Rank |
| 3 | Alex | 85 | 75 | 64 | =SUM(B3:D3) | =AVERAGE(B3:D3) | $=1 F(B 3>85, F 3+3, F 3)$ | =VLOOKUP(F3,\$D\$15:\$E\$19,2) | =RANK(G3,\$G\$3:\$G\$9) |
| 4 | Kate | 33 | 98 | 88 |  |  |  |  |  |
| 5 | Anjali | 94 | 45 | 54 |  |  |  |  |  |
| 6 | Arnav | 87 | 65 | 65 |  |  |  |  |  |
| 7 | Chang | 53 | 35 | 87 |  |  |  |  |  |
| 8 | Francisco | 76 | 85 | 77 |  |  |  |  |  |
| 9 | Eun Jung | 79 | 76 | 92 |  |  |  |  |  |
| 10 |  |  |  |  |  |  |  |  |  |
| 11 | Min | $=\mathrm{MIN}(\mathrm{B3}: 89)$ |  |  |  |  |  |  |  |
| 12 | Max | $=\mathrm{MAX}(\mathrm{B3}: \mathrm{B9})$ |  |  |  |  |  |  |  |
| 13 | AVG per quiz | =AVERAGE(B3:B9) |  |  |  |  |  |  |  |
| 14 |  |  |  |  |  |  |  |  |  |
| 15 | find the total mark of a student who has the max average | =SUMIF(F3:F9,F12,E3:E9) |  | 0 | F |  |  |  |  |
| 16 |  |  |  | 60 | D |  |  |  |  |
| 17 |  |  |  | 70 | C |  |  |  |  |
| 18 |  |  |  | 80 | B |  |  |  |  |
| 19 |  |  |  | 90 | A |  |  |  |  |

## Financial

PMT function returns the payment amount for a loan based on an interest rate and a constant payment schedule

$$
\begin{aligned}
& \text { PMT( interest_rate, number_payments, PV, [FV], [Type] ) } \\
& \text { Interest_rate - the interest rate for the loan. } \\
& \text { number_payments - the number of payments for the loan. } \\
& \text { PV - present value } \\
& \text { FV - future value }
\end{aligned}
$$

Type - optional. 0 for payments due at the end of the period, 1 for payments due at the beginning of the period
EXAMPLE: $=P M T(7.5 \% / 12,2 * 12,5000,0,1)$
Result: -\$223.60
